(Email 1) Subj. line: **Is your body type designed to NOT lose weight?**

It seems incredibly unfair.

Some people seem to lose weight easily. While others can't seem to lose weight no matter what they do!

You may be one of those people.

In fact, you may have a body type that is designed to NOT lose weight.

Researchers at Cambridge University have found the cause. An obesity protein that effectively shuts down your metabolism, sabotaging all your weight loss efforts.

You probably have more of these obesity proteins than other people.

The good news is they also found a way to turn off the obesity protein.

All it takes is **one simple nutrient** to turn it off so you can lose weight.

The Cambridge research found that those who took the nutrient **lost an average of 84% more weight** compared to the placebo group. Go here for details:

=====

(Email 2) Subj. line: **The one nutrient to restart your fat loss engine**

Researchers at Cambridge University have identified a single nutrient that can fire up your metabolism so you can burn off fat.

Your metabolism is your fat loss engine and when it isn't working as it should, it's just about impossible to lose weight and keep it off.

No diet, no exercise routine, stands a chance.

Trying to lose weight with a sluggish metabolism is like trying to drive a car with the brakes on.

This discovery releases those brakes! In fact, the research found that those who took the nutrient **lost an average of 84% more weight** compared to the placebo group.

In addition, it doubled the improvements to their Body Mass Index and substantially decreased dangerous abdominal fat.

**What this nutrient does is ignite your metabolism and activate cells in your body that DEVOUR fat.** Find out the details at this link:

=====

(email 3) subj: **“A Major Fat Burning Discovery”**

That’s what Harvard University called research that came out from another great university, Cambridge University, which has produced 50 Nobel Prize winners in the fields of chemistry, physiology, and medicine.

Cambridge set out to find out why some people lost weight easily while others cannot lose weight no matter what they do. You may be one of them.

The research found that it comes down to a **rogue protein** in your body which essentially stops your metabolism from functioning and burning fat. You may have more of these rogue proteins than people who lose weight easily.

I know what you’re thinking. “Well, that’s not fair!” “Why me?”

Hold on, there’s good news.

You see, once researchers found the REAL reason some people can’t lose weight, it opened a clear path to a solution.

**They needed to find a way to TURN OFF this rogue protein.**

And they found it.

Turns out to be pretty simple. All it takes is ONE NUTRIENT!
